TTF releases CatiaV5R15 reader and announces the support of 3DXML during DMS show in Tokyo .

Lyon, France – June, 21th, 2005 – TTF SA, a leading company in CAD data interoperability and Digital Mock up solutions, announced today the release of Catia V5R15 in its TTF Foundation and the support of 3DXML.

During DMS show in Tokyo held from 22 to 24 June, TTF will be exhibiting the last release of its now famous TTF's Foundation with a brand new reader dedicated to the new visualization format 3DXML. 3DXML will now be part of the TTF's Foundation and will be delivered from July, 1st. TTF is now providing the market with all the visualization formats such as XVL, Jt, CGR, 3DXML etc.

'Releasing 3DXML a few weeks after it appeared on the market was easy for TTF, which has already released the Japanese XVL format some years ago' said **Francis ALLIAS, TTF's CEO**. TTF Technical team pointed out some differences between the 3DXML and its originating XVL format.

Presentation of both the support of Catia V5R15 and 3DXML will be made at Kodama Corporation's booth by TTF people, who especially came from France to exhibit this new release.

About TTF

Located in Lyon-France, TTF develops, markets and supports best-in-class solutions for CAD data INTEROPERABILITY (TTF Foundation libraries), native-to-native translators and multi-CAD DIGITAL MOCK-UP and Collaborative Engineering solutions (Project Reviewer). Present in the automotive, aerospace, machinery and consumer products industries, TTF offers services including installation, maintenance, training, and specific developments worldwide.
